

THE NEWEST INNOVATION IN INSULATING GLASS TECHNOLOGY.

At Vista, we make shift happen.

Vista's advanced "Shift" technology:

- utilizes unequal, or "offset", glass spacing for optimum gas filling.
- incorporates gas blending to provide high energy-efficiency at the lowest cost available.
- meets or exceeds DOE-R5 energy requirements.
- partners with OptiGas to provide enhanced sound control.

Traditional Triple

Shift Technology with Duralite®

We make
shift happen.

Do your customers wonder...

? "Is the gas is really in there?" ?
? "Did I get what I paid for?" ?

With **OptiGas** and **ThermalCert**, you now have the technology to assure your customers that the U-value they pay for is the U-value they receive.

OptiGas revolutionizes insulating glass gas filling.

It's the first fully engineered, automated and integrated smart-fill system for insulating glass.

ThermalCERT distinguishes itself from current quality assurance methods.

It takes actual thermal conductivity measurements after the gas is inserted and sets testing frequency to assure statistical significance. It even stops production if a measurement is skipped or results are outside the control limits.
